

AT&I Systems
ACCESS TECHNOLOGY & INTEGRATION

Location

BankUnited is a nationally recognized commercial bank headquartered in Miami Lakes, Florida, with over \$35 billion in assets and 55 banking centers across Florida, New York, Texas, Georgia, New Jersey, and North Carolina. Ranked as the number one South Florida community bank by assets and named one of America's Most Trustworthy Companies by Newsweek in 2025, BankUnited has built its reputation on relationship-driven service, financial stability, and an unwavering commitment to the security and confidence of its clients.

With branches serving individuals, small businesses, and large corporations alike, maintaining a safe and secure environment across every location is not just a priority — it is a core part of the BankUnited promise. For over 15 years, AT&I Systems has been the trusted security partner helping BankUnited uphold that standard across its growing branch network.

Challenge

With 55 banking centers spread across multiple states, maintaining consistent and up-to-date security infrastructure across every branch presented an ongoing challenge. Each location operates with its own unique layout, entry points, and security requirements, making a standardized, scalable approach essential. Aging cameras, outdated alarm systems, and gaps in access control left certain branches without the level of protection expected of a financial institution of BankUnited's standing.

Beyond basic surveillance, branches required cohesive solutions that could address multiple layers of security simultaneously — including visitor management, panic response, perimeter coverage, and secure access to sensitive areas such as IT rooms, cash handling spaces, and staff-only zones. Without a trusted partner capable of managing diverse scopes of work across multiple locations, keeping every branch consistently protected was a complex and resource-intensive undertaking.

Solution

AT&I Systems serves as BankUnited's dedicated security partner across its branch network, providing a comprehensive range of services tailored to the specific needs of each location. Work across the branches has included the installation and upgrade of surveillance systems, burglar alarm systems, access control, and visitor management solutions — ensuring every layer of branch security is addressed under one trusted relationship.

Camera upgrades across various branches have included the addition and replacement of exterior and interior cameras to eliminate blind spots, cover vulnerable areas such as dumpster zones and exterior perimeters, and improve overall site visibility. Access control has been implemented at key entry points including front entrances, IT rooms, and staff areas, with panic button systems and motion sensors added to support rapid response capabilities. Visitor management solutions utilizing the Avigilon ALTA platform were deployed across select branches, providing a modern, streamlined way to log, track, and manage visitor access at the front desk.

AT&I has also handled sensitive infrastructure work including the relocation of IT rooms and camera servers, carefully coordinated around branch operating hours to minimize disruption to daily banking operations. From single-camera additions to full system installations, every project is managed with the attention to detail and professionalism that a financial institution of BankUnited's caliber demands.

Results

The ongoing partnership with AT&I Systems has allowed BankUnited to maintain a consistently high standard of security across its branch network, with each location benefiting from modern, reliable infrastructure tailored to its specific environment. Surveillance upgrades have eliminated coverage gaps and improved visibility at key exterior and interior areas, while AI-powered analytics provide an additional layer of intelligence — continuously monitoring for unusual activity and alerting staff in real time. Access control and alarm systems ensure that sensitive spaces and staff are protected at all times.

The addition of visitor management technology across select branches has modernized the front-of-house experience, giving staff greater control over who enters the branch and a clear, digital record of all visitor activity. For a bank built on trust, stability, and the confidence of its clients, having a dependable security partner in AT&I means every branch can operate with the peace of mind that their people, assets, and customers are well protected every day.
