

BLUEBIRD KIDS HEALTH Coconut Creek, FL

Location

Bluebird Kids Health is an innovative pediatric care provider committed to making high-quality healthcare accessible, affordable, and convenient for every child and family. With a team-based approach built on compassion, customized care, and 24/7 availability, Bluebird Kids Health is reimagining what pediatric medicine can look like — offering expanded hours, convenient locations, and a warm, family-centered environment where every child feels seen and valued. Their Coconut Creek location serves as one of the practice's community-facing clinics, providing a full range of pediatric services including routine care, developmental support, and behavioral health services in a welcoming and thoughtfully designed space.

With exam rooms, a behavioral health suite, a nurse station, a lab, administrative offices, and a busy lobby serving families and children throughout the day, ensuring that every area of the clinic is properly secured and access-controlled is essential to protecting patients, staff, and the confidential medical environment that families trust.

Challenge

As Bluebird Kids Health prepared to open its Coconut Creek location, establishing a reliable, modern, and fully integrated security system from day one was a critical priority. The clinic needed a solution that could control access across multiple key entry points — including the front entrance, behavioral health suite, and staff areas — while also providing camera coverage at both building entrances to monitor who is entering and exiting the facility.

With a patient population that includes children and families, and sensitive clinical areas requiring strict access control, a system that was both secure and easy to manage was essential from the moment the doors opened.

BLUEBIRD KIDS HEALTH
Coconut Creek, FL

Solution

AT&I Systems designed and installed a fully integrated Avigilon ALTA access control and camera system at the Bluebird Kids Health Coconut Creek clinic, purpose-built for the specific layout and security needs of a pediatric medical facility. Access control was deployed across key entry points throughout the clinic, with each door configured with the appropriate locking hardware to ensure secure and reliable operation. A video intercom was also integrated at one of the interior access points, adding an additional layer of controlled entry for staff. Both building entrances were equipped with Avigilon ALTA cameras, providing cloud-managed monitoring and visibility from the moment anyone approaches the facility. The entire system was configured, tested, and seamlessly integrated into the clinic's existing network infrastructure — ensuring a smooth and confident go-live experience for the Bluebird team.

Results

The installation gave Bluebird Kids Health Coconut Creek a secure, professionally managed system that supports the clinic's commitment to providing a safe and welcoming environment for every family that walks through their doors. Controlled access across all key entry points ensures that staff spaces and patient areas are accessible only to authorized personnel, while camera coverage at both entrances provides clear visibility throughout the day.

For a pediatric practice built on the promise of putting children and families first, having a security infrastructure that reflects that same level of care means the Coconut Creek team can focus entirely on what matters most — delivering exceptional care to every child, every day.
