

TEMPLE DOR DORIM

Weston, FL

Location

Temple Dor Dorim is a warm and welcoming Reform Jewish congregation located in Weston, Florida. Founded in 1996 with just eight families, the temple has grown into a thriving community of approximately 300 households, offering a full spectrum of Jewish life including worship services, an Early Childhood Center, Religious School, youth groups for every age from kindergarten through high school, adult education, and a rich calendar of cultural and community programs. The multi-building campus is designed to serve a multi-generational congregation that gathers throughout the week for learning, celebration, and community.

With children, families, staff, and congregants active across the campus daily, and a mission of providing a safe, open, and welcoming home for all who walk through its doors, maintaining comprehensive security across both the school and synagogue is essential to protecting the community Temple Dor Dorim has spent nearly three decades building.

Challenge

As Temple Dor Dorim's campus continued to grow and serve an increasingly active congregation, the need for a modern, comprehensive security system across both the school and synagogue buildings became clear. Spread across a multi-building campus with classrooms, corridors, shared spaces, and outdoor areas, maintaining consistent visibility and controlled access throughout the entire property was a significant challenge without a unified platform in place. Ensuring only authorized staff, students, and visitors could move through the buildings — while keeping the campus open and welcoming — required a more intelligent, connected approach to both surveillance and access control.

Solution

AT&I Systems designed and implemented a comprehensive Avigilon ALTA cloud-based surveillance and access control system across the full Temple Dor Dorim campus, covering both the school and synagogue buildings.

The camera system combines indoor and outdoor coverage throughout the property — including entryways, corridors, shared spaces, and exterior grounds — all equipped with built-in AI analytics that proactively detect and flag unusual activity in real time. The system is directly linked to the Broward County Sheriff's Office Real-Time Crime Center, allowing law enforcement to access camera feeds for faster dispatching and enhanced community protection.

The Avigilon ALTA access control system was deployed at scale across the school and synagogue, securing classrooms, entry points, and other key areas campus-wide with a cloud-managed credential system. Real-time door position sensors provide instant alerts if any door is left open, and the entire system carries a lifetime warranty on all panels and readers, giving the temple long-term reliability and peace of mind.

Results

The upgrades gave Temple Dor Dorim one of the most comprehensive and intelligently designed security systems of any house of worship in the region. Every classroom, corridor, entry point, and exterior zone across both the school and synagogue is now covered and controlled — giving staff, parents, and congregants the confidence that the campus is protected at every hour of the day. The direct integration with the Broward County Sheriff's Office Real-Time Crime Center adds an important layer of law enforcement connectivity, ensuring that any incident can be responded to as quickly and effectively as possible.

Managed from a single cloud platform, administrators can now monitor the entire campus remotely, receive instant alerts, and maintain complete visibility into building activity at any time. For a congregation whose mission is to be a welcoming home for all — and whose campus serves children, families, and community members throughout the generations — having a security infrastructure that protects that mission with the care it deserves is exactly what Temple Dor Dorim and AT&I built together.
